NEW SCIENCE QUARTERLY APPEARS IN CHINA

Chen I-t'ing (1) [numbers refer to appended characters], reviews Volume I, No 1 of the new periodical Chung-kuo K'o-hsueh (2) (China Science Quarterly) which appeared 13 October 1950. Among the articles he mentioned in this initial issue was "China's Work in the Field of Terrestrial Magnetism," by Chu Kang-k'un (3), a research fellow in the Institute of Geophysics of the Chinese Academy of Science. Chu discusses briefly the work that has been done in China in observing and measuring terrestrial magnetism, and describes the new terrestrial magnetic map of East Asia which he has produced.

Another article, by Professor Chu Ping-hai (4), of the Department of Meteorology in Nanking University [this is the government university of this name, and not the missionary institution known as the University of Nanking whose Chinese name is Chin-ling University], is entitled "Phenomena Attending the Advance of Spring in China," and it is stated that the author makes use of a number of models to demonstrate his thesis.

In addition, the Chung-kuo K'o-hsueh contains the following articles by university professors: four in the field of higher mathematics, seven on biological subjects, one on agricultural chemistry and one on a fifth century Chinese thinker Fan Chen (5) in the field of dialectical materialism.
